

# SENATOR SNOWE ON CARBON POLLUTION

“ I strongly believe we should provide the certainty and price signals critical for private enterprise to invest in innovative energy technologies and benefit from new economic opportunities in order for America to remain on the cutting edge so that China does not surpass us – all of which will also help secure our environmental future by reducing greenhouse gas emissions.

I will continue to work with my congressional colleagues to achieve our shared goals of fostering a healthy economy while moving toward a clean-energy future... ”

*Senator Snowe, with billions of dollars going overseas for imported oil and millions of gallons of crude spilled in the Gulf, we stand with you in the fight for action now on clean energy and climate change legislation. Please do all you can to work with the President to pass a bill this year.*

**The country is counting on you.**
