

“The answers to our problems don’t lie beyond our reach”

President Obama to Congress, 2/24/09

As the President said, the answers “exist in our laboratories and universities, in our fields and our factories, in the imagination of our entrepreneurs and the pride of the hardest working people on Earth.” But we need a policy – a cap on carbon pollution – to jump start our transition from an oil-addicted economy.

That is why President Obama told Congress that “to truly transform our economy, protect our security, and save our planet from the ravages of climate change, we need to ultimately make clean, renewable energy the profitable kind of energy.” And it’s why he asked them to send him “legislation that places a market-based cap on carbon pollution and drives the production of more renewable energy in America.”

It’s time to make a change. A cap will create demand for steel for windmills, new windows for energy efficient buildings, LED lighting, and thousands of other products made in America. See some of the real companies that will benefit from a cap at LessCarbonMoreJobs.org.

CHANGE THE FUTURE FOR THE BETTER.
CAP CARBON POLLUTION.
