

# It's Time to Power Up, Pennsylvania!

**We can power up the economy with millions of new jobs and reduce air and climate pollution by building more clean trucks, buses, cars and clean energy.** Over 87 million Americans are already getting service from an electric utility that's moving to net-zero emissions, but we need smart policies to reach our nationwide goal of 100% clean electric power by 2035. All of this will move us toward a healthier, more equitable and more prosperous future.

## Our Objectives

Dirty power plants are a major source of air, water and climate pollution and are often located in communities of color and low-income communities. **By investing in clean energy and energy efficiency** we can protect these communities, clean up our air and guarantee everyone access to reliable and affordable energy.

**Transitioning to zero-emission vehicles** will put hundreds of thousands of people to work, save thousands of lives every year, build up our domestic manufacturing base and make American businesses more competitive.

**The goal of all new cars, trucks and buses to be zero polluting by 2035 is achievable:** Every major truck, bus and car manufacturer is already developing or investing in all-electric, zero-emission vehicles.

## Pennsylvania Clean Economy Snapshot

**More than 87,000 Pennsylvanians** already work in clean energy jobs (11th in the country).

**Nearly 8,000 PA workers** manufacture or service zero emissions trucks and buses -- 10th among all states.

Electric vehicles already account for **7,600 Pennsylvania jobs**, and there are **17,530 EVs** on the roads in Colorado.

Congress is considering clean energy investments that would provide **\$9.3 billion** in funding for energy efficiency in Pennsylvania and **create more than 144,000 Pennsylvania jobs over five years, contributing \$11.2 billion to the state's GDP.**

**16 separate Pennsylvania companies** are part of the national manufacturing and servicing supply chain for zero emissions trucks and buses, the 15th highest in the nation.

Renewable energy would also **save the average Pennsylvania household \$500 a year.**

**Let's get to work creating healthier communities by building clean trucks, buses, cars and clean energy. It's time to Power Up, America!**
